

## Peace of Mind Lecture Series

# What's in a Name? The Neurobiological Basis of Seizures and Update on Epilepsy Classification

Presented by **Dr. Katherine Inoyama**

What type of seizures do you have? Having an understanding of the seizure types facilitates communication with your health care providers, can give insight into the possible causes of epilepsy, and impacts the treatment options that are available to you or your loved one. During this session, we will discuss seizure terminology including the most recent seizure classification scheme from the International League Against Epilepsy.

**About the presenter:** Katherine Inoyama, MD is an Assistant Professor of the Department of Neurology at the NYU School of Medicine. She received her medical degree from Georgetown University and completed her neurology residency training at Thomas Jefferson University Hospital, followed by a 2-year neurophysiology/epilepsy fellowship at Stanford University. She was in private practice for two years and recently joined NYU in pursuit of advancing our understanding of epilepsy through research while providing comprehensive and compassionate care to patients with epilepsy. Her interests include women's issues in epilepsy, epilepsy genetics, and co-morbidities associated with epilepsy such as cognitive impairment, mood disorders, and migraine.
